Software engineering

I've just started studying software engineering at VIA University. Right now, I'm taking lectures on Java and web development as part of programming. I've started to think it's interesting.

At first, I studied SOSU-helper. But I'm not so good at Danish, and I didn't feel confident to work as professional communicating in Danish. I looked for another path. That's when I started studying technical design which classes were in Danish. I was fortunate to have amazing teachers, and I enjoyed learning. Still, I ran into the Danish language barrier again. I realized that finding a job is difficult if your Danish isn't good. I worked on improving my Danish, but I gave up because I wasn't at a business level yet. Instead of struggling with Danish, I decided to focus on learning a specialty, and I chose software engineering, which has more job opportunities in English. I thought my knowledge of technical design could be useful, and since I like assembling things like puzzles, I thought I had a good fit for it. I'm now actively taking on this new challenge.

Education

- Teknisk design (HF2)
Aarhus Tech
- SOSU-hjælper
SOSU Østjylland
- Bachelor i japansk lovgivning
Kyoto Sangyo University (Japan)

Work experiences

- Receptionist
Hotel Tateyama(Japan)
Hotel green plaza Hakuba(Japan)
- Farming
(New Zealand)
- Shop assistant
Fujiya(Canada)
- Paralegal
Naniwabashi Law office(Japan)

Another experiences

I stayed abroad using a Working Holiday in Canada and New Zealand. I have a lot of experience with customer service and have learned a lot about being service-minded through my previous jobs. I have traveled a lot and learned about other cultures. This has made me open to new challenges in life and adaptable.

Language

- Japanese – Native language.
- English – Business level.
- Danish – Everyday conversation level

IT

- Word, Excel, Power point og project.
- Google drev.
- Inventor.
- Revit.
